

Strings:-

String = text

A string is simply a sequence of characters(text).

-- You can make a string by three ways:-

- 1) double quotes :- "your string"
- 2) single quotes :- 'your string'
- 3) backticks (Template string):- `your string`

We use back ticks when we need to perform any mathematical operation within our string or we need to use JavaScript code within our strings.

For this back ticks have a special feature known as String Interpolation.

We also use back ticks when we need to use multi line string

*** Back ticks has two special features

- 1) String interpolation.
- 2) Multi line string.

*** String Interpolation:-

1st step to use string interpolation is to make sure your string is surrounded by ``.

2nd step is to use \${} within your string

3rd step You can write any math or pass any kind of JavaScript variable, array, object, function within \${}

Escape characters:-

Escape characters are used to include special characters inside strings.

- 1) \' -- Single quote inside string
- 2) \" double quote inside string
- 3) \\ backslash inside your string
- 4) \n new line
- 5) \t tab
